OS Ref: NY 682093
Alt: 360m

Grades

58

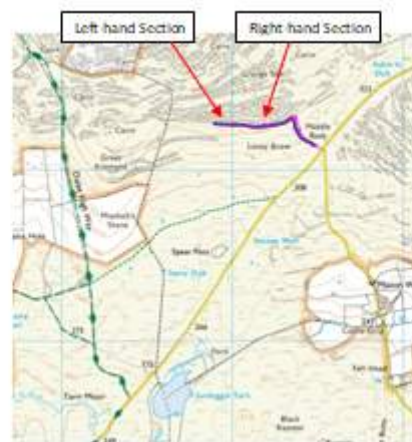

Magnificently situated 2 km north of Sunbiggin Tarn and 5 km east of Orton – this tiny, extensive scar offers many problems on juggy limestone. The area below is known as Lousy Brow ! Much of the scar is quite small but has two higher sections .
All the numbered routes were first climbed by Barry Clarke on 04/03/2008 after which he intimated - *That'll be enough to be going on with - but there will be plenty more to play on, go for it! Definitely worth a visit, but not by "serious" boulderers!*

The routes are described from right to left and are in two distinct sections above 160m apart.

The rock can be quite crumbly/loose in places, so best to test things out carefully, especially at the top, instead of jumping for the holds without checking first?

Approach

Park just below the summit of the Middle Busk road at a road junction. A footpath goes up the fellside and then along below the scar. The main landmarks are a tree and a bush at the Right-hand Section. There is a path along below the scar.
